Education

University College London (UCL) Summer Programme in Data Science	2023.06 - 2023.08
The Hong Kong Polytechnic University (PolyU) BSc in Computer Science & Minor in Applied Mathematics	2022.09 - 2026.10
Dean's Honour List (2022/2023)	

Internship Experience

Vivacity Ltd. HK Full-Stack Game Developer	2025.07 - 2025.08
● [Problem Identification]: User feedback was scattered across multiple communities, slowing collection and reducing iteration efficiency. ● [Workflow Development]: Built QQ and Discord chatbots plus a visual dashboard using OneBot, TypeScript, and Node.js to capture and organize group conversations in real time; Used lightweight NLP and rule-based matching to remove noise, classify valid feedback, and generate issue statistics by version and module. ● [Pilot Results]: Showcased the solution at ChinaJoy 2025, reaching about 500 daily interactions during the event.	
COXANA Innovation Ltd. AI Prompt Engineer & Frontend Development Assistant	2024.07 - 2024.08
● [Business Diagnosis]: Pinpointed a conversion bottleneck where the essential oil product pages lacked clear guidance on applicable symptoms and usage, leading to low page-to-purchase conversion and weak sales. ● [Feature Launch]: Proposed and built an Essential Oil Recommendation Chatbot using a symptom-oil dataset from WhatsApp groups, an AI prompting pipeline, and website integration. ● [Business Impact]: The chatbot could accurately respond to roughly 70% of common queries and automatically link to corresponding product pages, with backend data showing clear increases in recommendation chats, product page visits, and about a 10% uplift in essential oil sales.	

Research and Project Experience

Nanyang Technological University Undergraduate Summer Researcher (Dr. Dong Wei's Lab)	2025.06 - 2025.08
● [Threat Framework]: Proposed the first systematic description of a threat framework for LLM-driven web crawlers and constructed a specialized evaluation dataset for adversarial image extraction covering three types of attack scenarios and two defense strategies. ● [Workflow Design]: Designed two main crawler workflows, LLM-to-Script and LLM-Native Crawlers, and integrated multi-agent coordination mechanisms to enable automated extraction of dynamic web content. ● [Experimental Validation]: Evaluated extraction performance using both recall and precision, completing 20 rounds of comparative experiments to validate the effectiveness of LLM-based crawlers in adversarial image extraction scenarios.	
PolyU Educational Research Centre GPTutor RAG Module Optimization Student Assistant	2024.06 - 2026.06
● [RAG Optimization]: Co-designed and implemented GPTutor, a campus GenAI learning platform, and proposed a “hierarchical chunking + metadata enhancement” RAG strategy that splits long documents into chunks and augments them with metadata such as section titles to reduce fragmented context in cross-chapter Q&A. ● [Evaluation Results]: Improved cross-chapter response relevance in 50 cross-chapter Q&A tests, raised perceived answer quality among 70–80% of surveyed students, and supported about 60% higher traffic during exam periods.	
Agent-Driven Academic Advisor Platform Independent Developer	2025.10 - 2026.06
● [Problem Targeting]: Addressed gaps in academic advising in PolyU, where students struggled with complex rules and the legacy chatbot could not handle natural language queries. ● [Platform Architectural Design]: Implemented an academic advisory platform for PolyU using Dify-based multi-agent workflows, knowledge bases built upon a PDF-to-Markdown + web crawling pipeline to transform official documents into retrievable knowledge. ● [Strategy & Performance]: Developed clarification and fallback strategies for ambiguous queries and mental health scenarios; evaluations showed overall retrieval precision and simple-query accuracy of about 90% and substantially higher success rates than the legacy chatbot on the test set.	

Campus and Leadership Experience

PolyU EAGLE Global Youth Leadership Programme	2024.09 - 2025.05
● Collaborated with organizations such as the United Nations, Chinese embassies, and World Vision to obtain key insights for projects and drive product implementation on the ground. ● Proposed baseline frameworks for product design, implementation, and maintenance that were adopted by the EAGLE team and rolled out to additional pilot schools in Nepal.	

Entrepreneurship and Awards

● 【Co-Founder, Kiwi AI Ltd.】 focusing on integrated vertical AI applications and customized AI solutions for real-life education scenarios ● 【HK Techathon+ 2025】 Bronze Award, 2025 HK Techathon+ ● 【PolyU Micro Fund (2024–25)】 securing HKD 100,000 in seed funding for product development, marketing, and brand building ● 【Publications】 Zhang, Q. (2025). PromptCraft-RAG: Context-Based Prompt Enhancement for Optimising Retrieval-Augmented Generation Queries. Applied and Computational Engineering, 154(1), 137–144. DOI: 10.54254/2755-2721/2025.TJ23129	
--	--

Skills

● AI & Frameworks: LangChain, PyTorch, TensorFlow, NumPy; prompt engineering, RAG, autonomous agents. ● Development & Tools: Python, Java, Node.js, TypeScript, HTML, CSS, JavaScript; React, Vue, Next.js, Redis, Docker (basics), sandbox environments. ● Languages: English (fluent), Mandarin (native), Cantonese (written proficient, daily conversation).
